The Targa mount kit is designed specifically for mounting an Air Turbine to a yacht Targa Bar. The Targa can be made of fibreglass, composite, stainless steel or whatever, with the appropriate fitting technique.

Picture shows the prototype system being used on a Stainless Steel Targa using "U" bolts to hold the whole thing in place. This boat has since covered many thousands of ocean miles.

***Note:** The mounts we use now are smaller as these turned out to be overkill.

Shown is our standard mount with a height of 670mm.
Comes with 3 X soft mounts with stainless steel washers.
This system will virtually eliminate vibration transmission from the wind turbine to your boat.
We can make custom mounts for any turbine or any system. Just ask.
Price of this system just \$297.00

Rutand & Ampair wind turbines.
Sharp Solar, Selectronics Inverters, Plasmatronics Solar controllers,
Isotherm refrigeration and more.
